W2350 series overview

W2350 PickUpMatchingAmplifier and equalizer system

The W2350 equalizers are specialists when it comes to the equalization of record player pickups. The all-rounder W2350 PUMA allows easy and quick adaption even to exotic MM pickups.

The W2350 MM and MC are designed for standard cartridges, with the possibility of customizing individual equalization curves.

W2350 PUMA MM

- Switchable pick up adjustment of reactance and capacitance
- Channel balance adjustment via selected RK27 ALPS® -Pot
- Different input transformers depending on size are possible

W2350 MM

- Equalizer for moving magnet pick up systems
- Same circuit as the W2350 PUMA but with fixed input values
- Impedance parameters can be changed by the customer

W2350 MC

- Equalizer for moving coil pick up systems
- Same circuit as the W2350 PUMA but with fixed input values
- Different input transformers are possible

W2350 series common data

- Inputs and outputs via balanced XLR or unbalanced cinch sockets
- Internal wiring through VOVOX® -Klangleiter
- Power supply by external PSU
